<https://www.linkedin.com/in/harshal-patil1207>

Summary:

Results-driven Data Scientist with hands-on experience in building end-to-end machine learning, NLP, and deep learning projects. Proficient in Python, TensorFlow, and AWS cloud tools, with exposure to MLOps tools like MLflow and DVC. Proven ability to apply practical knowledge in real-world AI, LLM, and data science roles.

Education:

Bachelor of Technology, Artificial Intelligence, G H Raisoni Institute of Engineering and Technology, Nagpur (August 2019 - August 2023)

Skills:

- Languages & Tools: Python, SQL, C++, Git, GitHub, Docker, Postman, Dagshub, Octoparse
- Data & Visualization: Pandas, NumPy, SciPy, Seaborn, Matplotlib, Plotly, H2O, Data-Profiling
- ML & AI: Scikit-learn, Trees, Ensembles, Time Series, Supervised & Unsupervised Learning
- Deep Learning: TensorFlow, PyTorch, ANN, RNN, LSTM, U-Net, Transformer, LLM
- MLOps & Deployment: MLflow, DVC, DAGsHub, Flask, Streamlit, GitHub Actions, CI/CD

Experience:

Data Science Intern, Ineuron Intelligence Pvt. Ltd. (May 2024 - February 2025)

- Built and evaluated ML models (Random Forest, CatBoost, Logistic Regression) on a dataset of 30,000+ credit card clients, achieving 91% accuracy in predicting default risk.
- Engineered features from payment history, credit utilization, and demographics, improving model precision/recall by 12% through data preprocessing and selection.
- Deployed the best-performing model as a Python REST API on AWS, enabling real-time credit risk analysis for financial institutions.
- Implemented CI/CD pipelines and followed PEP8 standards with version control on GitHub.
- Visualized and communicated model insights using ROC/PR curves and applied MLflow for tracking and reproducibility.

AI Intern, Remark Skill Education (June 2021 - July 2021)

- Completed structured AI/ML training with in-depth coverage and hands-on implementation of supervised and unsupervised learning algorithms.

Python Intern, Happieloop (January 2024 - February 2024)

- Utilized logical reasoning and critical thinking to solve multiple problem statements.
- Developed multiple Python programs, including a calculator, to-do list, word counter, and rock-paper-scissors game, applying loops, conditionals, and user input handling.
- Implemented algorithmic solutions for Fibonacci sequence, prime number check, factorial, and temperature conversion, with proper testing and error handling.

Projects:

- Loan Approval Prediction Machine Learning Project (Banking Domain) - Built a sentiment analysis model using advanced NLP techniques to extract sentiment from financial news, reports, and social media.
- Credit Risk Prediction using Ensemble ML Model Machine Learning Project (Banking Domain) - Developed and evaluated multiple machine learning models on a dataset of 30,000+ credit card clients, achieving up to 91% accuracy in predicting default risk.
- Diabetes Prediction Web App (Healthcare) - Led the containerization and initial cloud deployment strategy of a predictive analytics application using Docker and Azure infrastructure.

Publications:

- Mask Detection and Identity Identification (International Journal of Engineering and Creative Science) - August 1, 2022
- Liver Segmentation Using Computer Vision (International Journal of Science and Development Research) - December 17, 2022

Certifications:

- Python Basic (HackerRank)
- Python Intermediate (HackerRank)
- SQL (HackerRank)
- Introduction to Machine Learning (Kaggle)
- Machine Learning Fundamentals with Python track (DataCamp)
- Linear Classifiers in Python (DataCamp)
- Supervised Learning with Scikit-learn (DataCamp)
