

SUMMARY

Enthusiastic and detail-oriented AI/ML enthusiast with hands-on experience in building end-to-end machine learning, NLP, and deep learning projects. Proficient in Python, TensorFlow, Hugging Face, and AWS cloud tools with exposure to MLOps tools like MLflow and DVC. Eager to apply practical knowledge in real-world AI, LLM, or data science roles.

PROJECTS

Diabetes Prediction

Prediction Web App | Healthcare | Medical Informatics | Python, Flask, Git, MLflow, DVC | [\[link\]](#)

- Led the containerization and initial cloud deployment strategy of a predictive analytics application using Docker and Azure infrastructure.
- Set up an automated ML experiment tracking server using DAGsHub and MLflow, creating a robust framework for managing model lifecycle and logging deployment artifacts.
- Integrated DVC (Data Version Control) to decouple large datasets from the git repository, ensuring dataset versioning was synchronized with code changes.
- Configured a production-grade WSGI HTTP Server using Gunicorn to serve real-time ML inferences via Flask, ensuring application stability under concurrent loads.

Loan Approval Prediction

Machine Learning Project | Banking Domain | Python, Flask, Git, MLflow, DVC | [\[link\]](#)

- Built a sentiment analysis model using advanced NLP techniques to extract sentiment from financial news, reports, and social media, leveraging domain-specific models like FinBERT and BiLSTM for improved accuracy.
- Collected and preprocessed large volumes of financial text data, applying feature engineering and data augmentation to enhance model performance.
- Evaluated multiple machine learning and deep learning approaches, achieving high F1 scores and reliable sentiment classification for market trend prediction.

Credit Risk Prediction using Ensemble ML Model

Machine Learning Project | Banking Domain | Python, Flask, Git, MLflow, DVC | [\[link\]](#)

- Developed and evaluated multiple machine learning models (Random Forest, CatBoost, Logistic Regression, etc.) on a dataset of 30,000+ credit card clients, achieving up to 91% accuracy in predicting default risk.
- Engineered key features from payment history, credit utilization, and demographics, improving model precision and recall by 12% through targeted feature selection and data preprocessing.
- Deployed the best-performing model as a Python API, enabling real-time risk assessment for financial institutions and supporting more informed lending decisions.

EXPERIENCE

- AI/ML Intern | AiAdventure | November 2025 - March 2026 | Pune
 - Spearheaded the cloud architecture and deployment strategy for multiple predictive analytics projects, translating local ML models into scalable, production-ready applications on Azure.
 - Automated and optimized container workflows by pushing customized Docker runtimes to Azure Container Registry (ACR) and configuring startup commands for deep learning and ML inference containers.
 - Provisioned and configured Azure Web Apps to host containerized AI/ML models, ensuring reliable REST API endpoints for real-time predictions.
 - Developed standardized training frameworks utilized across multiple datasets to automate hyperparameter tuning, model evaluation (Random Forest, SVM, Deep Learning), and artifact generation.
 - Established industry-standard MLOps practices by centralizing model metrics via remote MLflow servers and utilizing SQL/Python for secure, programmatic data ingestion.

- Data Science Intern | Ineuron Intelligence Pvt. Ltd. | May 2024–February 2025 | Remote

Domain: Finance & Banking | Tools: AWS, Azure, Github, MLflow, Dagshub, DVC.

- Built and evaluated ML models (Random Forest, CatBoost, Logistic Regression) on a dataset of 30,000+ credit card clients, achieving 91% accuracy in predicting default risk.
- Engineered features from payment history, credit utilization, and demographics, improving model precision/recall by 12% through data preprocessing and selection.
- Deployed the best-performing model as a Python REST API on AWS, enabling real-time credit risk analysis for financial institutions.
- Implemented CI/CD pipelines, and followed PEP8 standards with version control on GitHub.
- Visualized and communicated model insights using ROC/PR curves, and applied MLflow for tracking and reproducibility.

- **Python Intern | Happieloop** | January 2024–February 2024 | Remote
 - Utilized logical reasoning and critical thinking to solve multiple problem statement.
 - Developed multiple Python programs including a **calculator**, **to-do list**, **word counter**, and **rock-paper-scissors game**, applying loops, conditionals, and user input handling.
 - Implemented algorithmic solutions for **Fibonacci sequence**, **prime number check**, **factorial**, and **temperature conversion**, with proper testing and **error handling**.
 - Followed **modular coding practices**, used Python libraries like **random**, and maintained clean, well-documented code adhering to Python conventions

- **AI Intern | Remark Skill Education** | June 2021–July 2021 | Remote
 - Completed structured **AI/ML training** with in-depth coverage and hands-on implementation of **supervised and unsupervised learning algorithms**.
 - Gained practical experience in model development, evaluation, and optimization through various machine learning exercises.
 - Designed and developed an end-to-end **Face Mask Detection system** using **FaceNet**, **MaskNet**, **MobileNetV2**, and **OpenCV**.
 - Applied deep learning techniques for **real-time face detection and mask classification**, achieving high model accuracy.
 - Strengthened understanding of **computer vision**, **image processing**, and model deployment using lightweight and efficient architectures.

SKILLS

- **Languages & Tools:** Python, SQL, C++, Git, GitHub, Docker, Postman, Dagshub, Octoparse
- **Data & Visualization:** Pandas, NumPy, SciPy, Seaborn, Matplotlib, Plotly, H2O, Data-Profilling
- **ML & AI:** Scikit-learn, Trees, Ensembles, Time Series, Supervised & Unsupervised Learning
- **Deep Learning:** TensorFlow, PyTorch, ANN, RNN, LSTM, U-Net, Transformer, LLM
- **MLOps & Deployment:** MLflow, DVC, DAGsHub, Flask, Streamlit, GitHub Actions, CI/CD

EDUCATION

G H Rasoni Institute of Engineering and Technology, Nagpur

Bachelor of Technology, Artificial Intelligence

| August 2019–August 2023

Publication

- | | |
|---|------------|
| ● Mask Detection and Identity Identification
(International Journal of Engineering and Creative Science) | 01/08/2022 |
| ● Liver Segmentation Using Computer Vision
(International Journal of Science and Development Research) | 17/12/2022 |

Certification

- Python Basic (HackerRank)
- Python Intermediate (HackerRank)
- SQL (HackerRank)
- Introduction to Machine Learning (Kaggle)
- Machine Learning Fundamentals with Python track (Datacamp)
- Linear Classifiers in Python (DataCamp)
- Supervised Learning with Scikit-learn (DataCamp)
